

Healing-Targeted Drug Eluting Stent

HT SUPREME™

Drug Coated Coronary Stent System

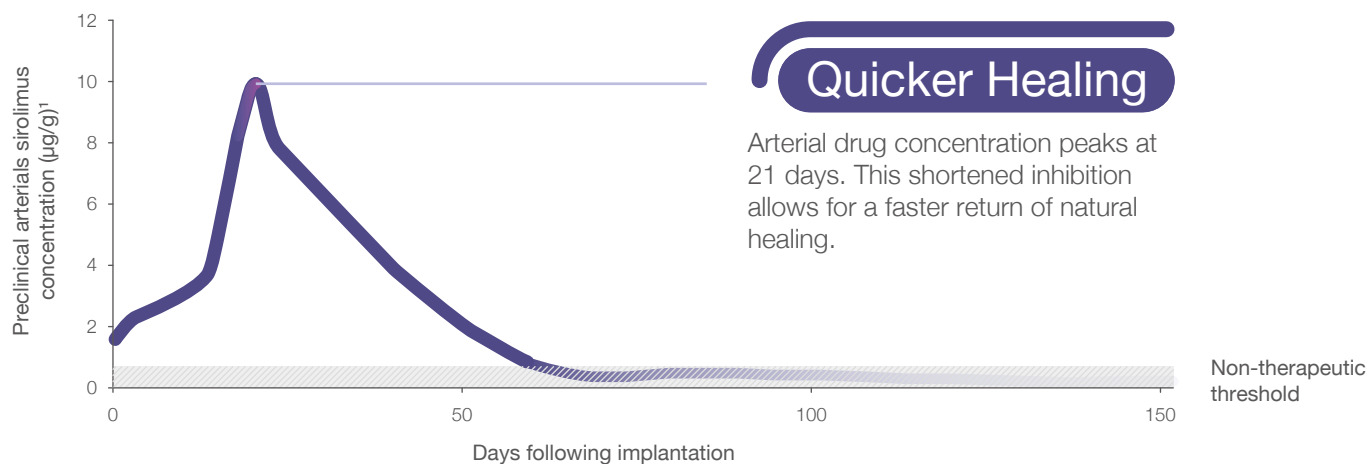

| Advanced Coating System | Safe Clinical Data | Superior Deliverability |

SINO MED
Innovation for health

HEALING-TARGETED

A new class of DES tailored for rapid healing

Rapid Bioabsorption

Biodegradable polymer is absorbed in less than 60 days² leaving an eG coated stent and allowing for faster, unhindered reendothelialization to occur.

¹ von Birgelen C. et al. First-in-man randomised comparison of the BuMA Supreme biodegradable polymer sirolimus-eluting stent versus a durable polymer zotarolimus-eluting coronary stent: the PIONEER trial. EuroIntervention. 2018 Apr 20;13(17):2026-2035.

² Data on file at SINOMED.

SAFETY-TARGETED

Allows a quicker return of the protective endothelial layer

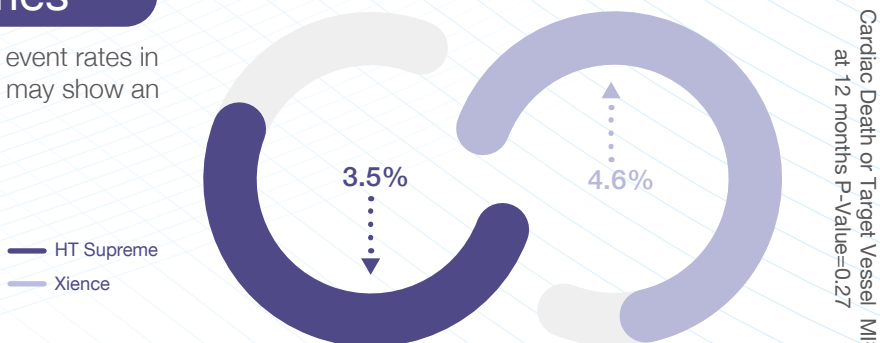

Functional Healing

Preclinical data showed less Evans Blue uptake, indicating healthier healing of endothelial cells and better return of functionality.

Safe Outcomes

HT Supreme demonstrated low event rates in clinical trials. Long-term results may show an advantage of the healing effect.

⁴ Lansky et al. Novel Healing-Targeted DES with Synchronized Antiproliferative Drug Delivery to Target Smooth Muscle Cell Proliferation after DES implantation in Coronary Artery Disease. Oral presentation. AHA Late-Breaking Trials Session 2020.

CONSISTENCY-TARGETED

eG[®] coated for **stronger** coating integrity and more consistent results

How eG Coating is Made?

1 Stent is submerged in a monomer solution, an electric current is applied and coating is electro-grafted to the stent.

Electric current is cycled, causing a brush-like structure of eG coating to be synthesized onto the surface of the stent.

3 The filament-like structure of the eG coating allows interdigitation of the PLGA coating, forming a strong bond.

Excellent Integrity

eG coating allows the polymer to have excellent coating integrity, even after tortuous-path testing and balloon expansion (seen in scanning electron microscopy⁵).

⁵ Data on file at SINOMED.

DELIVERABILITY-TARGETED

Stent and delivery system designed for **excellent** deliverability

80
μm

Thin strut design

Cobalt chromium stent material with thin-strut design for better outcomes.

Better metal-to-artery ratio

Stent design allows for better scaffolding and consistent drug release.

Helical connectors

Three-helical connectors per segment allows for better flexibility without sacrificing stability.

Lubricious coating

Lubricious coating on the distal shaft improves deliverability for difficult lesions.

Technical Information

Stent Material	Cobalt Chromium Alloy	Strut Thickness	80 µm
Base Layer	eG® Coating	Recommend Guiding Catheter	5 F
Polymer Material	PLGA	Recommend Guiding Wire	0.014"
Drug Dose	Sirolimus 1.2 µg / mm ²	Delivery System Length	145 cm
